£5,700

Leigh, Greater Manchester

Gutter Refurbishment Works

Tritec Building contractors were awarded with the following works:

- **DriSilane® ReTrim Gutter Refurbishment Works** - Operatives thoroughly cleaned and prepared the gutters. Once gutters were prepared the next step was to coat the surfaces with one coat of DriSilane® Prime, gun apply DriSilane® RS to gutter joint details and tool immediately with one coat of DriSilane® DSG to form a complete bridged seal. Operatives then coated all base coated areas with one coat of DriSilane® DSG.

Tritec Building Contractors are experienced refurbishment contractors that provide efficient services to extend the lifespan of commercial building fabrics & their components.

Gutter refurbishment Works - DriSilane RePair

After cleaning the gutters our operatives had identified a number of perforations caused by the thinning and corroding of the original gutter substrate.

Before

After

- ▶ Gutters on commercial buildings are designed to manage rainwater run off by controlling water levels and drainage.
- ▶ Poor maintenance will result in blocked outlets, polluted standing water, silt and plant growth which reduce capacity, and promote building leaks and substrate failure.
- ▶ DriSilane® ReTrim is designed to reinstate long term protection to joints and surfaces of structurally sound external gutters.
